PHOENIX Announces Dual Gravity Zone Press

PHOENIX Process Equipment Co., of Louisville, Kentucky, has announced an important addition to its line of Model WX Belt Filter Presses.

The new PHOENIX Model WX-D features dual gravity zones for maximum hydraulic flow rates per meter of belt width on very difficult, low feed solids biological sludge applications. The integral third belt pre-thickener accelerates gravity drainage, while the extended gravity and wedge zones provide superior dewatering performance and versatility.

PHOENIX Process Equipment Co. is a leading global supplier of systems for separation, classification, thickening and dewatering dredged sediments and minerals slurries and for dewatering sludge from industrial and municipal wastewater treatment systems.
